

## INNOVATION

### DIAMOND POWER CORD – our high point – hard to beat!

Our reference plus power cord is our statement but the NEW DIAMOND POWER CORD is indeed our high point! That means that our reference plus power cord receives a boost!

The DIAMOND POWER CORD needs a considerable increased time-consuming production method: 47 (!) components applied on the UP OCC solid core conductor in very precise time intervals over several weeks. The network can, therefore, only start six weeks later.

A great input for an incredible output: a highlight for all music lovers!

- magical quiet music reproduction where the whole field of frequency can be heard completely stressless
- more dynamic, more transparent and remarkably subtle in high frequency
- fascinating reproduction of voices
- deeper, sonorous and precise bass
- enjoy the colours of music!
- and a very important fact: an incredible extended stage!

The most important DIAMOND Cable is the power cord. A high-flyer that records best the additional benefit of this outstanding quality.

Made in Switzerland obliges us to a constant and steadily improved quality. These requirements mean further development in details. That is why we postpone the announced introduction of Diamond Interconnects at the same time as the Diamond Power Cord.
